VAMA Pumps is a specialized Pumps Manufacturer Focused on the main production of Stainless Steel Submersible and Vertical Multistage Pumps . It has been founded in 1968 and its first main production was based on the manufacturing of Submersible Motors and Pumps Spare Parts.

In 1974 it start its own production of Submersible Pumps and motors upon 100 Hp and enlarge the production in 1982 up to 300 Hp and 12" Pumps diameter. Thanks to the employment of realible Engineers and Marketing Manager it had expanded the Market activity along European Market and Middle East Countries and in 1988 had remark its presence in Maghreb Areas and Central Africa.

In 1994 the Owner and Marketing General Manager has been amazed by the Extreme High and realible efficiency and application flexibility of the Stainless Steel Submersible Pumps and has seen a shining future of this kind of products. Starting from 1995 the Designing, Project and Production of new line of 4" and 6" Stainless Steel Pumps has been kick started getting an unexpected success in the market and rise up the presence of company in the key position markets in few years making it one of the main Stainless Steel Pump manufacturer in the World.

Thanks to this initial success VAMA has start and complete the production of new Serie of Stainless Steel Pumps to 8", 10" & 12" bore hole application developing pumps up to 250 Kw power.

In 2011 **VAMA** has a further development in its production activity, thanks to the support of its main and most important Customers it has start the Production of Complete Set for Pumps' station including Horizontal Multistage Pumps , Pipes and Fitting installation, Surge Tank against Water Hammer Strikes and High Technology Telemetric SCADA Controls Systems for Water Treatment and Authomatic Pumping Station Management.

General Data

4" Stainless Steel Submersible Pumps

Vama 4" range of submersible pumps are made of corrosion and abrasion resistant stainless steel and have been developed in accordance with state-of-the-art technology. The 4" pumps are manufactured to the highest standards for energy efficiency, dependable performance, rugged construction, and long service life.

Capacity (m³/h) min 0.3 max 18

Total Head: Max. 285 m

Applications

- ◆ Potable water supply from deep wells
- ◆ Agricultural-Irrigation, livestock watering, etc.
- ◆ Municipal and industrial
- ◆ Pressure boosting
- ◆ Fountains, etc.

Pumped Liquids

- ◆ Clean, non-corrosive and non-abrasive liquids.

Operating Conditions

- ◆ Max. ambient temperature (Liquid): 90°C
- ◆ Sand content: Max. 50 g/m³

Features

- ◆ Stainless steel construction designed and built for years of trouble free operation
- ◆ All metal parts are made of 304 stainless steel
- ◆ Heavy duty stainless steel discharge head with built-in check valve for long life and ease of installation
- ◆ Smooth safety hook
- ◆ Mounting specifications are according to NEMA standards
- ◆ High quality shaft bearings providing low friction and high wear resistance
- ◆ Heavy duty stainless steel impellers & diffusers ensuring optimal performance
- ◆ Stainless steel strainer to restrict the entry of sand and other extraneous material
- ◆ **Pump shaft could work upon 3500 rpm**
- ◆ **Pump could properly work vertical or horizontal mounted**

6" Stainless Steel Submersible Pumps

Vama 6" stainless steel submersible pumps are made of high quality 304 or 316 corrosion resistant stainless steel. Shafts are made of high strength 304 stainless steel. The pumps are designed for efficient and dependable performance, and a long and trouble-free life. The pumps are light in weight and ruggedly constructed for heavy duty applications.

Capacity (m³/h) min 3 max 78
Total Head: Max. 720 m

Applications

- ◆ Potable water supply from deep wells
- ◆ Agricultural-Irrigation and livestock watering
- ◆ Municipal and industrial water supply
- ◆ Pressure boosting
- ◆ Mine de-watering
- ◆ Fountains, etc.

Pumped Liquids

- ◆ Clean, non corrosive and non-abrasive liquids.

Operating Conditions

- ◆ Max. ambient temperature (Liquid):90°C
- ◆ Sand content: Max. 50 g/m³

Features

- ◆ Stainless steel construction designed and built for years of trouble free operation
- ◆ Heavy duty stainless steel discharge head with built-in check valve for long life and ease of installation
- ◆ Mounting specifications are according to NEMA standards
- ◆ High quality shaft bearings providing low friction and high wear resistance
- ◆ Heavy duty stainless steel impellers & diffusers ensuring optimal performance
- ◆ Stainless steel strainer to restrict the entry of sand and other extraneous material
- ◆ Pump shaft could work upon 3500 rpm
- ◆ Pump could properly work vertical or horizontal mounted

General Data

8" Stainless Steel Submersible Pumps

Vama 8" submersible pumps are designed for heavy duty and high volume pumping applications. Highly efficient hydraulic impeller and diffuser designs reduce energy requirements and provide long and dependable service life, even in difficult environments.

Capacity (m³/h) min 12 max 120

Total Head: Max. 412 m

Applications

- ◆ Municipal water supply and distribution
- ◆ Municipal water treatment
- ◆ Industrial-for cooling, cleaning and production
- ◆ Agriculture-for irrigation, etc.
- ◆ Pressure boosting in high rise buildings, etc.
- ◆ Dewatering in mines
- ◆ Fountains, etc.

Pumped Liquids

- ◆ Clean, non corrosive and non-abrasive liquids.

Operating Conditions

- ◆ Max. ambient temperature (Liquid): 90°C
- ◆ Sand content: Max. 50 g/m³

Features

- ◆ High pump efficiency means lower energy consumption and thus lower operating costs
- ◆ Designed and built to operate under difficult conditions
- ◆ High quality materials and high quality workmanship assures high quality pumps
- ◆ All metal parts are made of 304 stainless steel
- ◆ Heavy duty stainless steel discharge head with built-in check valve for long life and ease of installation
- ◆ A high strength stainless steel coupling facilitates a proper pump/motor alignment
- ◆ Mounting specifications are according to NEMA standards
- ◆ Pump shaft could work upon 3500 rpm
- ◆ Pump could properly work vertical or horizontal mounted

10"-12" Stainless Steel Submersible Pumps

Vama 10" submersible pumps are designed for heavy duty and high volume pumping applications. Highly efficient hydraulic impeller and diffuser designs reduce energy requirements and provide long and dependable service life, even in difficult environments.

Capacity (m³/h) min16 max280

Total Head: Max. 500 m

Applications

- ◆ Municipal water supply and distribution
- ◆ Municipal water treatment
- ◆ Industrial-for cooling, cleaning and production
- ◆ Agriculture-for irrigation, etc.
- ◆ Pressure boosting in high rise buildings, etc.
- ◆ Dewatering in mines
- ◆ Fountains, etc.

Pumped Liquids

- ◆ Clean, non corrosive and non-abrasive liquids.

Operating Conditions

- ◆ Max. ambient temperature (Liquid):90°C
- ◆ Sand content: Max. 50 g/m³

Features

- ◆ High pump efficiency means lower energy consumption and thus lower operating costs
- ◆ Designed and built to operate under difficult conditions
- ◆ High quality materials and high quality workmanship assures high quality pumps
- ◆ All metal parts are made of 304 stainless steel
- ◆ Heavy duty stainless steel discharge head with built-in check valve for long life and ease of installation
- ◆ A high strength stainless steel coupling facilitates a proper pump/motor alignment
- ◆ Mounting specifications are according to NEMA standards
- ◆ Pump shaft could work upon 3500 rpm
- ◆ Pump could properly work vertical or horizontal mounted

The image features a large, dynamic splash of water in shades of teal and blue, forming a circular frame around the central text. The text is centered within this frame. Below the text, several vertical pump units of varying heights and designs are displayed against the water background. The units are primarily metallic silver, with some featuring black top sections or black lower sections. The overall composition is clean and professional, emphasizing the company's focus on water-related technology.

VAMA
PUMPS
MOTOR

4" high-yield rewindable oil filled submersible motors in AISI 304.

The use of high-quality materials highlights the electrical and mechanical properties of the motors.

The stator, 24-slot lamination made, has been thought to obtain maximum electrical performance and it is hermetically sealed.

The winding, asynchronous type, studied to work perfectly also with inverter "Inverter Resistant" type.

The external sleeve and bottom cover are in stainless steel AISI 304 to avoid the corrosion when these parts are in contact with the water.

The upper support, nickel-plated cast iron made, protected by a stainless steel top cover.

The upper and lower ball bearings, duly oversized to assure long life to the motors.

The rotor shaft, carbon-steel alloy in the rotor area. The protrusion is in stainless steel AISI 304 up to 3 hp; from 4 hp to 10 hp it is in stainless steel DUPLEX that guarantees an excellent mechanical resistance, which is absolutely necessary with very high starting torque.

The mechanical seal is in graphite/ceramic. The particular form of the lodging of the mechanical seal guarantees higher seal to the motor.

The cable (approved KTW, ACS, WRAS) is equipped with a special connection plug studied to avoid the climb of the oil along the cable during the operation, besides the connection plug allows an easier substitution of the cable in case a longer one is needed.

The oil inside the motor is food-tested and it is in compliance with the prescription of the Italian Pharmacopeia and approved from the and Drug Administration (U.S.A.).

I_a = Starting current

I_n = Nominal current

A series of rewindable submersible standard water filled motors with high performance, over sized and extraordinarily simple to maintain. Completely "MADE IN ITALY", NEMA standard and made to meet environmental provisions.

CHARACTERISTICS OF THE PRODUCT:

Thrust bearing, the real heart of the submersible motor, is of "Michell" bidirectional type with pads in treated steel and supported by a disk in resin compound fibres and self-lubricating additives, fully ecological. The union between these materials withstands impacts and exceptional axial thrusts for greater efficiency and safety.

The supports, upper and lower are in GS400 spheroid cast iron which give greater resistance to impacts and corrosion attacks by water.

The stator is covered by an AISI 304 stainless steel sheath that withstands stray currents.

The windings of asynchronous type are:

- for the "F" series in copper wire with insulation in PVC
- for the "F.C." series in copper wire with insulation in PE2 + PA, suggested for high temperatures, surges in tension and "Inverter Resistant".

The rotor shaft is particularly strong, guided by pilot bush anti-wear bearings in graphite, completely in AISI 420 stainless steel without welding; it is ground along the entire axis thus giving the rotor concentricity such as to ensure perfect linearity.

With balancing, a shaft free from vibration is obtained.

The mechanical seal, fitted in series, "SIC-SIC" silicon-silicon carbide and ensures optimum sealing even with sandy water.

The membrane ensures compensation for balancing the internal-external pressure of the motor.

The feed cable elastomeric reticulated mixture, of EPR type for foodstuff use, certified KTW, WRAS and ACS for drinking water.

The filler liquid clear water with addition of propylene glycol specifically studied to safeguard primary waters. It performs the function of cooling, antioxidant and antifreeze, ensures storage of the motor to -15°C.

Bolts and screws, simple things but not to be underrated, these are in AISI 304 stainless steel, well worked so as to avoid detachments from corrosion in the long term.
